

Game Keyboards

From Anybody Can Play PIANO app

www.anybodycanplay.com

Finding one's way around a piano keyboard requires the ability to recognize the pattern of black and white keys.

These drawings of partial keyboards can be used many ways.

1. Laminate and cut apart enough for all the children. Make a sample with colored marks or removable stickers on some keys and have the children duplicate the sample with their markers or stickers.
2. Use as a paper FunSheet....again color coding a sample and having the children duplicate the sample.
3. Color code keys to match the dots on the keyboard in the Anybody Can Play PIANO app for a given song. This can be done as a group activity as well as an individual activity.
4. Have several keyboards already color coded in different ways and have the children pick keyboards that are alike. The small keyboards work well for this activity.
5. Touch particular key(s) with particular finger(s);
6. Let the children make up some games.
