

Xylophone Songs

The xylophone is a good first instrument for learning to play songs. It can also be used for the first glimpse of reading music. The following are the 8 notes on a xylophone. They can be used in many ways, one of which is color coding the music notes to match the color of the tune bars of your own xylophone. If your child uses the music, but relies on the color coding, your child is still being exposed to music notation.
